## Northern Starburst Rhododendron

*Rhododendron 'Northern Starburst'*

Height: 4 feet

Spread: 3 feet

Sunlight:

Hardiness Zone: 5a

### Description:

A beautiful evergreen shrub, covered in attractive rich pink flowers in spring, ball-shaped and compact, ideal garden size; absolutely must have well-drained, highly acidic and organic soil, use plenty of peat moss when planting

### Ornamental Features

Northern Starburst Rhododendron is smothered in stunning clusters of lightly-scented pink trumpet-shaped flowers at the ends of the branches in mid spring. It has green foliage. The narrow leaves turn an outstanding purple in the fall. The fruit is not ornamentally significant.

### Landscape Attributes

Northern Starburst Rhododendron is an open multi-stemmed evergreen shrub with a more or less rounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Northern Starburst Rhododendron is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

### Planting & Growing

Northern Starburst Rhododendron will grow to be about 4 feet tall at maturity, with a spread of 3 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the leaves in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
