Features & Attributes

Polka Dot Plant's attractive pointy leaves remain dark green in colour with distinctive pink spots throughout the year on a plant with a mounded habit of growth.

This is an herbaceous evergreen houseplant with a mounded form. This plant should not require much pruning, except when necessary to keep it looking its best.

Planting & Growing

When grown indoors, Polka Dot Plant can be expected to grow to be about 12 inches tall at maturity, with a spread of 12 inches. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. This houseplant will do well in a location that gets either direct or indirect sunlight, although it will usually require a more brightly-lit environment than what artificial indoor lighting alone can provide. It does best in average to evenly moist soil, but will not tolerate standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time. It is not particular as to soil type or pH; an average potting soil should work just fine.
