Height: 10 feet

Spread: 10 feet

Sunlight: ○

Hardiness Zone: 4a

Other Names: Common Lilac

Group/Class: New Age Series

Description:

A stunning selection featuring large, fragrant lavender clusters that emerge from rose buds in spring; upright, multi-stemmed habit; hardy and mildew resistant; ideal for screening; full sun and well-drained soil, allow room for air movement

Ornamental Features

New Age Lavender Lilac features showy panicles of fragrant lavender flowers rising above the foliage in mid spring, which emerge from distinctive rose flower buds. The flowers are excellent for cutting. It has green deciduous foliage. The heart-shaped leaves do not develop any appreciable fall colour.

Landscape Attributes

New Age Lavender Lilac is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a high maintenance shrub that will require regular care and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering
- Invasive
- Insects

New Age Lavender Lilac is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

New Age Lavender Lilac will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. To help this plant achive its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
