Purple Flame Blue Flag Iris

Iris versicolor 'Purple Flame'

Plant Height: 24 inches

Flower Height: 3 feet

Spread: 24 inches

Spacing: 24 inches

Sunlight: ☉ ●

Hardiness Zone: 3a

Description:

An attractive variety, producing wide clumps of deep violet blooms on tall stems, with interesting purple tinged foliage before changing to green; appears in late spring and early summer; great for borders, containers or used in fresh cut flower bouquets

Ornamental Features

Purple Flame Blue Flag Iris has masses of beautiful violet flag-like flowers with purple overtones at the ends of the stems in mid spring, which are most effective when planted in groupings. The flowers are excellent for cutting. Its sword-like leaves emerge plum purple in spring, turning green in colour throughout the season.

Landscape Attributes

Purple Flame Blue Flag Iris is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Purple Flame Blue Flag Iris is recommended for the following landscape applications;

Planting & Growing

Purple Flame Blue Flag Iris will grow to be about 24 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 24 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
