Albert Crousse Peony

Paeonia 'Albert Crousse'

Height: 3 feet

Spread: 3 feet

Spacing: 30 inches

Sunlight:

Hardiness Zone: 2a

Description:

Old fashioned, light-pink and cream colored double blooms in early summer; the petals are tightly packed; the flowers open on long stems and may require staking; rarely needs dividing

Ornamental Features

Albert Crousse Peony features bold lightly-scented double shell pink flowers with creamy white overtones at the ends of the stems from mid spring to early summer. The flowers are excellent for cutting. Its compound leaves emerge burgundy in spring, turning green in colour throughout the season.

Landscape Attributes

Albert Crousse Peony is an herbaceous perennial with a more or less rounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Albert Crousse Peony is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Albert Crousse Peony will grow to be about 32 inches tall at maturity, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. The flower stalks can be weak and so it may require staking in exposed sites or excessively rich soils. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
